Nicolas Gatta

AI Engineer | Data Engineer

WORK EXPERIENCE:

Data Engineer – IBM FutureNow Center, Antwerp, Belgium ***Mar 2026 – Today***

European Commission – AI Recruitment Process Automation

- Generalized a Python recruitment pipeline to automate CV conversion and support reuse across multiple European Commission tenders
- Designed a multi-step AI workflow using GPT-5 model to screen, compare and rank candidates against configurable skills, certifications and experience requirements
- Automated candidate justification documents, providing structured and auditable reasoning for profile selection

UCB – Process Transformation

- Led the mapping and assessment of 94 end-to-end business processes through Process Owner interviews, identifying bottlenecks and organizational redundancies
- Designed and deployed a GPT-5-powered Python pipeline to automate transcript analysis and report generation, reducing manual effort by 75–80% while preserving human validation

Data Center Technician – Google, Saint-Ghislain, Belgium ***Nov 2025 - Mar 2026***

- Provided operational support for the data center (hardware, physical network, media security) and carried out large-scale maintenance and troubleshooting tasks

Data Scientist Intern – Takeda Pharmaceuticals, Lessines, Belgium ***Sep 2024 - Nov 2024***

- Improved a RAG system by optimizing clustering and model training, achieving a 5% accuracy gain
- Contributed to a computer vision solution for detecting vial misplacement on the production line
- Deployed the solutions using Python, PyTorch, MLflow and Databricks

COMPETENCES TECHNIQUES:

Programming	*Python, SQL, Java*	***Databases***	*MySQL, SQLite*
AI / ML	*PyTorch, Scikit-learn, OpenCV*	***MLOps***	*Databricks, MLflow, Docker, Git*
Data	*Pandas, NumPy, Matplotlib*	***Web***	*React, Angular, JavaScript, TypeScript*

CERTIFICATION:

Anthropic	*Claude Certified Developer – Foundations, Claude Certified Associate – Foundations, Claude Certified Architect – Foundations, Claude Partner Badge – Claude Code*
Microsoft	*Microsoft Certified: Azure AI Fundamentals*
AWS	*AWS Partner: Generative AI Essentials*

EDUCATION:

Master's degree in computer sciences specialized in Artificial Intelligence and Data Analytics *– Université de Mons, Belgium* ***Sep 2022 - Jul 2025***

Bachelor's degree in business informatics *– Haute École de Namur-Liège-Luxembourg, Belgium* ***Sep 2018 - Jul 2022***

LANGUAGES:

French	*Native*	***Dutch***	*Basic knowledge*
English	*CEFR C1*		

SOFT SKILLS:

Teamwork | **Flexibility** | **Reliable** | **Analytical Thinking**
Problem Solving | **Time Management** | **Communication** | **Open Minded**

PROJECTS:

Unmonitarr *(Actively Maintained)*

- Developement of a webhook-based middleware service that integrates between Overseerr/Jellyseerr and Radarr/Sonar with the goal of automatically converting newly approved media requests to an unmonitored state.
- **Technologies:** Python, HTML, JavaScript, CSS

Ptero-Panel *(Actively Maintained)*

- Developed a self-hosted Pterodactyl management dashboard providing server monitoring and control capabilities, with secure server-side API integration, hierarchical server organization, persistent configuration management, and support for embedding into popular dashboards.
- **Technologies:** HTML, JavaScript, CSS

Cronario *(In Development)*

- Developed a scheduling management platform combining cron-expression assistance, execution timeline visualization, and conflict detection to help users plan, validate, and optimize scheduled workloads across multiple machines and applications.
- **Technologies:** React, TypeScript, JSON, Vite, SCSS

T.A.W.A. *(In Development)*

- T.A.W.A. (Treatment and Automation of Work Application): development of a desktop application designed to manage and track job applications, integrating an Applicant Tracking System (ATS), dynamic charts, a gross-to-net salary calculator, and tracking of professional and salary history.
- **Technologies:** Vite, React, TypeScript, SQLite, ATS

Tune Taker *(Actively Maintained)*

- Development of an application that enables users to download music from YouTube in under 10 seconds using a direct link, a title /artist search through the Youtube API or audio recognition through the Shazam API.
- **Technologies:** Dart, Flutter

DermaTrack *(Released)*

- Development of dermatological monitoring software leveraging computer vision and super-resolution algorithms to improve image quality by 15%. The application provides dermatologists with an intuitive interface for accurately capturing, processing, and annotating images using data collected from a purpose-built external device.
- **Technologies:** Python, JavaScript, Django, HTML, HTMX, CSS, IoT, Super-Resolution, SRCNN, SRGAN, ESRGAN, EDVR, PyTorch, Scikit-learn, Matplotlib

C-3BOT *(Released)*

- Development of an AI-powered chatbot prototype using Natural Language Processing (NLP) to assist users with code correction and optimization. The system provides recommendations across five distinct categories while integrating basic conversational capabilities.
- **Technologies:** Python, Django, Pytorch, JavaScript, HTML, CSS, NLP, BERT, TF-IDF, Bag of Words, Tokenization, Lemmatization, Stemming, Word2Vec, GloVe

Energo-Sphere *(Released)*

- Development of a web-based energy portfolio management application enabling users to monitor their energy consumption, manage contracts, and receive real-time notifications from their energy providers.
- **Technologies:** HTML, JavaScript, Java (API), SQL, CSS, TypeScript, SCSS, Angular
