CONTENT DRAFT / FIRST EDITION

Representative content is awaiting confirmation. Replace this document with the final CV.

01 / PROFILE

Data Engineer with a background in Artificial Intelligence, Data Analytics and Software Engineering. Interested in building complete systems: intelligent models, data platforms, software and the infrastructure that connects them.

02 / TECHNICAL FOCUS

Data: Python, SQL, data pipelines, data modelling

AI: machine learning, computer vision, RAG, model evaluation

Software: TypeScript, React, API design, Git

Infrastructure: Linux, Docker, networking, automation

Areas of practice and exploration. No proficiency ratings are implied.

03 / REPRESENTATIVE TIMELINE

2021 Brussels South Charleroi Airport

2024 Takeda

2025 Google

2026 IBM

Dates supplied for the portfolio concept. Roles and relationships to be confirmed.

04 / SELECTED PROJECT CONCEPTS

DermaTrack - computer vision, super resolution, IoT, medical imaging

Knowledge Systems - retrieval-augmented generation and traceable answers

Unmonitarr - automation and self-hosted systems

Illustrative case studies. Final implementations and outcomes are not yet verified.

05 / EDUCATION & CERTIFICATIONS

Confirmed qualifications and certifications will be added with the final CV.
